

# CAMILA CABALLERO

## Git Hub

### 1. What is GitHub?

- ✦ GitHub is a platform used by coders and programmers to share their work or change and download the work of others.

### 2. What is GitHub for?

- ✦ GitHub's main use is for uploading your code and projects to the word, and has more uses such as repositories (which will be explained in a moment), and is a better way to organize files and document your coding/programming journey.

### 3. How does it work?

It works as a cloud, letting you upload, as mentioned previously, your code and projects, also permitting you to change the work of others and vice versa.

### 4. What is a repository and how do I make one?

A repository can be made by changing the configuration at the following site, <https://github.com/new>

A repository is a cloud to store your files/code in one organized place, and is used by many professionals.

### 5. How do I upload new files?

To upload new files, simply navigate to the main page of the repository and click the following button:
